

Instructions for preparing the solution script:

- Write your name, ID#, and Section number clearly in the very front page.
 - Your submission must be a hardcopy and a handwritten version.
 - Start working right away. No late submission will be accepted for the assignment.
-

Assignment Task Description [10 Marks]:

You have to study the direct method of converting regular expression to DFA from Subsections 3.9.1 to 3.9.5 of Chapter 3 of the reference [textbook](#) and **convert the following regular expression to an equivalent DFA using the Direct Method** (Show all the steps such as Augmentation, Syntax tree generation , First and Last position, Follow position, State transition table and the DFA):

$$(a|b^*)^*(a|c)^*bc^*b$$

You can check Regular Expression to DFA Conversion [Example](#) and [Lecture](#) from there.
